Wednesday Challenge Form

Group Members:

Problem Statement: Decide and figure out whether or not taking a math class or writing out to 1 million is faster and more efficient.

Approach: We broke down the amount of time in days you spend in math class and the average time you could reasonably spend writing numbers, and we concluded that it would take at least 185 days of writing or 7.5 days of class straight.

Solution: We decided on math class due to the drastic time and effort difference between the options.

Lessons Learned: Try to account for every factor that can affect your answer.
